Scope Tracking Cabinet

The scope tracking cabinet efficiently and cost-effectively manages endoscope storage. The clear and visual interface improves scope monitoring and reduces the chances (and time and expense) of reprocessing expired endoscopes. The system identifies scope locations, storage times, and lengths of time before scopes expire. It also generates a report that records all scope activity within the cabinet.

- Support compliance by monitoring hanging times of clean scopes
- User friendly 10" touchscreen provides clear operation for monitoring endoscope status
- Monitor scope storage from touchscreen on cabinet or remotely via the InnerSpace Cloud platform
- Modify or add to scope inventory at any time
- Customizable report captures scope information and status
